

# PERSONAL BOOK

**YOGESH KOHLI**  
**822046180**

## **Few points about my project:**

1. It's an app which lets you create and save your personal notes.
2. Create notes – text as well as drawing mode – you can draw and save them as image in external storage (provided you should have the external storage source)
3. You can edit the notes as well.
4. You can secure your notes with passwords.
5. Firebase Database used to store and retrieve notes to the server.

## **Libraries used:**

1. Firebase database used -  
<https://firebase.google.com/docs/database/android/start/>
2. Drawing view – third party API -  
<https://github.com/mukeshsolanki/DrawingView-Android>
