

PERSONAL BOOK

(My Book)

YOGESH KOHLI
822046180

Few points about the project:

1. It's an app which lets you create and save your personal notes.
2. Create notes – text as well as drawing mode – you can draw and save them as image in external storage (provided you should have the external storage source)
3. You can edit the notes as well.
4. You can also delete the notes if you want.
5. You can secure your notes with passwords.
6. Firebase Database used to store and retrieve notes to the server.

Important:

In drawing mode, you can save the drawing as an image in internal storage provided you allow the permissions (dialog box will ask you for the permission).

Location of the image saved: File explorer -> Internal Storage -> filename (randomly generated through code in order to avoid name clashes).
You can look the file by going to this location.

Libraries used:

1. Firebase database used -
<https://firebase.google.com/docs/database/android/start/>
2. Drawing view – third party API -
<https://github.com/mukeshsolanki/DrawingView-Android>
